Make Sure You've Got The Right Size

To Measure Square Containers:

For liner width, measure around the outside top of container (the sum of all four sides) and divide by half. For liner length, use the height of the receptacle plus one-half of the diagonal bottom measurement plus three inches for overhang.

To Measure Round Containers:

For liner width, measure outer circumference of container and divide by half. For liner length, use the height of the receptacle plus one-half of the diagonal bottom measurement plus three inches for overhang.
